Lock Bumping –

Lock Bumping has become a legitimate security threat as information on the topic has become widely exposed in the news media and on the internet.

In response to this threat, the Master Lock Company developed our exclusive patent-pending BumpStop® Advanced Technology that prevents the transfer of force from the bump key to the pins and blocks rotation of the cylinder. With a reverse rake tapered driver pin, high performance spring and precision tolerance chamber, our 4, 5 and 6-pin BumpStop® products ***exceed*** the ASTM F883-09 Standard for Grade 6 lock bumping resistance.

BumpStop® is available in a full range of American Lock padlocks and security products today!

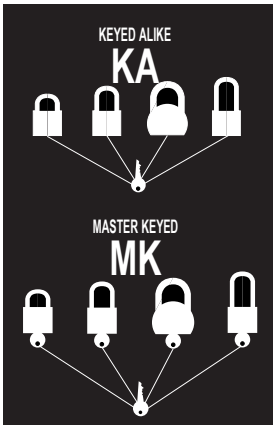
Services

The services below are all available at an additional charge.
Please contact your American Lock representative for a quote.



PADLOCK KEYING OPTIONS

- **Keyed Different (KD)** - Each padlock has its own unique key. All products are made keyed different unless requested otherwise.
- **Keyed Alike (KA)** - Keyed alike is a term used to describe a set of padlocks which can be opened with the same key. Keyed alike offers convenience to customers who use numerous padlocks by eliminating multiple keys. Many domestically produced products are available keyed alike. (Padlocks and cylinders can also be keyed-alike in sets or groups.)
- **Master Key (MK)** - In a master key system, one key operates all the master keyed padlocks or cylinders in one or more groups.
- **Rekeyable** - Rekeying is the process of removing a padlock's cylinder and either rearranging the cylinder pins to different locations in the cylinder chamber or completely replacing the pins. Finished replacement cylinders are available from American Lock for a quick and easy rekeying process. The advantage of a padlock with a rekeyable cylinder is that when there is employee turnover or when a key is lost or stolen, the padlocks can be easily serviced rather than replaced. Many American Lock padlocks are available with this feature.
- **Restricted (R)** - American Lock offers restricted key systems with factory controlled keyways. This feature offers added security by restricting unauthorized key duplication.
- **Edge® Key Control (WP)** - American Lock offers patent-pending Edge® Key Control. The manufacturer is the only producer of key blanks. Key blanks and cut keys are strictly controlled by the manufacturer. (Patented cylinder and keys are protected by law from unauthorized duplication.)
- **Master W1, W15, W17, W27, W81** - Cylinders which are keyable to Master Lock® padlocks.
- **Non-Removable Key (NR)** - The key cannot be removed from the padlock when the padlock is open. This helps prevent users from accidentally leaving the padlock in the open position. Only selected padlocks offer this option.

KEY CHARTING

- Customers can benefit fully from the large American Lock change key ranges by having us chart your keying system for you. We will keep a complete record of the progressive key codes assigned and manufactured into your padlocks for each order. You will be assured that there is no unwanted key duplication with the padlocks you purchase over time. Be sure to request this special service with your next order so that all locks purchased from that point forward will be manufactured to comply with your key system requirements. Any orders placed by an end user or distributor should note that they are on a key charting system, or reference their End User I.D. Number.
